

BvWare™

K-Band DT AM Grade 3 Detector

Model: RK515DTG3

U.S. Patent Number:
This product is protected under Patent No. US 7,126,476 B2. Other patents pending.

CE Compliance Section:
Risco Ltd. hereby declares that this equipment is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. For the EC Declaration of Conformity please refer to our website: www.riscogroup.com

EN 50131-1
EN 50133-2-4
Grade 3
Environmental Class II

FCC modular approval
Contains FCC ID UXS-IPM165F
BWARE RK515DTG3 FCC Compliance Section:
FCC Part 15 Note:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician.

FCC Warning:
The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the

RISCO Group Limited Warranty
RISCO Group and its subsidiaries and affiliates ("Seller") warrants its products to be free from defects in materials and workmanship under normal use for 24 months from the date of production. Because Seller does not install or connect the product and because the product may be used in conjunction with products not manufactured by the Seller, Seller cannot guarantee the performance of the security system which uses this product. Seller's obligation and liability under this warranty is expressly limited to repairing and replacing, at Seller's option, within a reasonable time after the date of delivery, any product not meeting the specifications. Seller makes no other warranty, expressed or implied, and makes no warranty of merchantability or of fitness for any particular purpose. In no case shall seller be liable for any consequential or incidental damages for breach of this or any other warranty, expressed or implied, or upon any other basis of liability whatsoever.
Seller's obligation under this warranty shall not include any transportation charges or costs of installation or any liability for direct, indirect, or consequential damages or delay. Seller does not represent that its product may not be compromised or circumvented; that the product will prevent any personal injury or property loss by burglary, robbery, fire or otherwise; or that the product will in all cases provide adequate warning or protection. Seller, in no event shall be liable for any direct or indirect damages or any other losses occurred due to any type of tampering, whether intentional or unintentional such as masking, painting or spraying on the lenses, mirrors or any other part of the detector.
Buyer understands that a properly installed and maintained alarm will only reduce the risk of burglary, robbery or fire without warning, but it is not insurance or a guaranty that such event will not occur or that there will be no personal injury or property loss as a result thereof.
Consequently seller shall have no liability for any personal injury, property damage or loss based on a claim that the product fails to give warning. However, if seller is held liable, whether directly or indirectly, for any loss or damage arising under this limited warranty or otherwise, regardless of cause or origin, seller's maximum liability shall not exceed the purchase price of the product, which shall be complete and exclusive remedy against seller.
No employee or representative of Seller is authorized to change this warranty in any way or grant any other warranty.
WARNING: This product should be tested at least once a week.
CAUTION: risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to local regulations.

ENGLISH

The BvWare DT AM detector is the ultimate motion detector for professional installations, incorporating both Anti-Mask and Anti-Cloak™ Technologies (ACT™) and includes built-in end-line (EOL) resistors to simplify installation. The detector employs K-Band microwave providing reduced wall penetration.

Installation / Maintenance
Mounting - The BvWare DT AM can be mounted either on a flat surface or on a wall corner (corner mounting).
1. Remove detector's front cover using a suitable tool (as described in Figure 1).
2. Using a suitable tool, open the following knockouts on the detector's base (see Figure 2).

Note! A back tamper is to be used if it is mandatory to screw the tamper back into the wall (or wall corner).
3. To select the correct vertical adjustment position for wide angle lens, use the scale on the bottom right hand side of the PCB cover as follows:
Mounting height and scale position based on room size:

Mounting Height	L-LONG	S-SHORT
2.1m-2.7m (6'11"-8'10")	15m (50')	6m (20')

4. Set DIP switches and jumpers (see DIP Switch / Jumper Settings section).
Note! Reset the detector after each change made to the settings.
5. Install the front cover back to its place (in a reverse sequence of the removal).
6. Perform a Walk Test (see Walk Test section below).

Terminal Wiring (see Figure 6)

Terminal	Description
-12 +	12VDC Input
ALARM	N.C. Relay
TAMPER	N.C. Tamper switch
FAULT/AM	Normally Closed Relay: The FAULT/AM relay opens in the following events: • Detector is masked (Alarm relay is also opened) • Self test failed • Input voltage is lower than BVDC
LED	LED operation remote control When an "Activation Signal"™ is applied to the LED input terminal, all LEDs will be disabled. LEDs are enabled if nothing is connected (unless LED DIP is OFF) or 12V is applied (according to the LED/SET Input Jumper position, 12V or OFF).
SET	Remote SET/UNSET control SET: If an "Activation Signal"™ is applied, anti-mask detection is disabled (for Grade 2 configuration). UNSET: If nothing is connected or 0V/12V is applied (according to the LED/SET Input Jumper position, 12V or 0V) anti-mask detection is enabled (see also "Green Line" and "Remote Self Test").

**Activation Signal- If 12VDC is applied, and the LED/SET Input Jumper is on 12V position (Default position) - Or -
0V is applied and LED/SET Input Jumper is on 0V position

DIP Switch / Jumper Settings

DIP Switch	Function
SW1-1: LED	Used to determine the operation of the detector's LEDs ON: LEDs are enabled, allowing LED control via the LED input terminal. OFF: LEDs are disabled
SW1-2: ACT	Used to determine if ACT mode is enabled or disabled ACT Enabled Important! Do not use ACT™ mode if you are expecting that there will be moving objects outside the required protected area, a corridor for example.
ON	OFF (Default)
SW1-3: Green Line	The BvWare DT AM includes a Green Line feature that follows environmental guidelines. This feature disables the MW channel when the alarm system is "Unset", thus eliminating surplus MW emission from the area occupied. ON: Green Line feature is enabled. To deactivate the MW module during "UNSET", the LEDs must also be remotely disabled by the LED terminal. Note! When "Green Line" is on (Microwave off), the detector will still activate (PIR only). OFF (Default): Green Line feature is disabled; MW is constantly in use.
SW1-4: Self Test	Used to test detection technologies. ON: (Local Self Test): If there is no alarm detection in the PIR channel for a period of one or 1 hour, the detector will self-test. If the local self test fails, the FAULT/AM Relay will activate. OFF (Default): (Remote Self Test): Remote Self Test is activated when the SET terminal is switched from SET to UNSET mode. For remote self test pass, the Alarm Relay will activate for 5 seconds.
J1 - Alarm EOL	Jumpers J1 and J2 allow the selection of Tamper and Alarm resistance (1K, 2.2K, 4.7K, 5.6K, 6.8K) according to the control panel (see Figure 4) Jumper J3 allows the selection of 12K for EOL Anti-Mask.
J2 - Tamper EOL	
J3 - FAULT/AM EOL	Follow the terminal block connection diagram in Figure 4 when connecting the detector to a Double/Trip End Of Line (EO/L/TEOL) Zone.
J4 - LED/SET INPUT	Used to determine the polarity of the external input.

Walk Test
Important! The detector cover must be closed when applying power or within 30 seconds after applying power, otherwise AM calibration will fail.

1. Two minutes after applying power (warm-up period), walk test the Detector over the entire protected area to verify proper operation of the unit (see Figure 7).
2. The K-Band MW range must be adjusted using the potentiometer located on the PCB. It is important to set the potentiometer to the lowest possible setting that will still provide enough coverage for the inner boundary protected area (see Figure 5).

LEDs Display

LED	State	Description
Yellow	On	PIR detection
	Flashing	Trouble in PIR channel
Green	On	MW detection
	Flashing	Trouble in MW channel
Blue	On	ALARM
	Flashing	Anti-Masking detection Note! Anti Masking detection is operational in "Unset" mode only (see Terminal Wiring section, SET terminal).

LEDs Display

LED	State	Description
All LEDs	Flashing consecutively	At power-up, the LEDs will flash consecutively until the end of the warm-up period (2-3 minutes). At the end of the warm-up period the BLUE LED will continue to flash until the end of AM calibration.

Note! AM and Trouble indications continue until masking is removed or trouble is corrected.

Technical Specification

Electrical	
Current consumption	16mA At 12VDC (typical) 41mA At 12VDC (max.)
Voltage requirements	9-16VDC***
Alarm contacts	24VDC 0.1A
Tamper contacts	24VDC 0.1A
FAULT/AM contacts	24VDC 0.1A
Environmental	
RF immunity	According to EN50130-4
Operating temperature	-10°C to 55°C (14°F to 131°F)
Storage temperature	-20°C to 60°C (-4°F to 140°F)
Optical	
Filtration	White Light Protection
Physical	
Size	127.6 x 64.2 x 46.6 mm (5 x 2.5 x 1.84 in.)
Weight	120 gr. (4.2 oz.)

*** Power to be supplied by 5A max. power source using safety approved wires, with a min Gauge of 20AWG.

ITALIANO

Il rivelatore BvWare DT AM è un rivelatore di movimento che integra le tecnologie più avanzate per le installazioni professionali. Questo rivelatore include sia la tecnologia Anti-Mask™ che quella Anti-Cloak™ (ACT™) ed ha la resistenza di fine linea integrata nel circuito per semplificare al massimo l'installazione. Il rivelatore BvWare DT AM utilizza la microonda in banda K la quale consente una penetrazione ridotta attraverso i muri.
Installazione / Manutenzione
Installazione - Il rivelatore BvWare DT AM può essere installato sia su una superficie piana che ad angolo.
1. Rimuovere il coperchio del rivelatore utilizzando un attrezzo appropriato (come descritto nella Figura 1).
2. Utilizzare uno strumento appropriato affinché i fori a sfondare, di seguito elencati, della base del contenitore come illustrato in Figura 2.
Note! Se deve essere utilizzato il tamper antirimozione è obbligatorio avvitare al muro (o angolarmente al muro) la linguetta del tamper antirimozione.
3. Per selezionare la posizione corretta della scheda elettronica con la lente grandangolo montata, usare i riferimenti (LONG / SHORT) situati nella parte inferiore destra della scheda elettronica seguendo le indicazioni della tabella di seguito illustrata.
Altezza di installazione e regolazione scheda elettronica in funzione dell'arsad copertura:

Altezza di installazione	L - LONG	S - SHORT
2.1m-2.7m	15m	6m

4. Prendere i ponticelli e i microinteruttori (vedere la sezione relativa).
5. Rimontare il coperchio frontale e stringere la vite di blocco coperchio.
6. Effettuare una prova di copertura (Sezione Prova di movimento vedere in basso).

Note! Ad ogni modifica delle predisposizioni/regolazioni, effettuare sempre un reset del rivelatore rimuovendo e applicando tensione.

5. Rimontare il coperchio frontale e stringere la vite di blocco coperchio.
6. Effettuare una prova di copertura (Sezione Prova di movimento vedere in basso).

Cablaggio Morsetteria (vedere Figura 6)

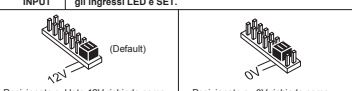

Morsetto	Descrizione
-12 +	Ingresso di alimentazione 12V
ALARM	Relè N.C.
TAMPER	Interruttore N.C.
FAULT/AM	Relè N.C.: il relè FAULT/AM si attiva per gli eventi seguenti: Il rivelatore è mascherato (anche il relè di allarme viene attivato) L'auto-test del sensore è fallito. L'ingresso di alimentazione è inferiore di 8V
LED	Controllo remoto del LED e funzione GREEN LINE (con microinteruttore SW1-3 in posizione ON) Quando viene applicato un "Segnale di Attivazione"™ al morsetto LED, tutti i LED vengono attivati, e se il microinteruttore GREEN LINE è in ON, la sezione microonda viene disabilitata. Note! Il relè ha la microonda viene disabilitata non ci deve essere alcun comando ad innescare il SET.
SET	Controllo remoto dello stato impianto Stato Inattivo: Quando viene applicato un "Segnale di Attivazione"™ a questo morsetto, il circuito di Anti-Mask viene disabilitato. Stato Disinserito: Se all'ingresso non viene collegato niente il circuito Anti-Mask è abilitato (vedere anche la tabella di predisposizione ponticelli e microinteruttori riferita alla funzione "Green Line" e "Auto-Test Sensore").

**Per Segnale di attivazione si intende quanto segue - Viene applicata una tensione 12Vcc e il ponticello LED/SET Input è nella posizione 12V (posizione di default)
Viene applicato un riferimento di alimentazione 0V e il ponticello LED/SET Input è nella posizione 0V

Predisposizione microinteruttori e ponticelli

Microint.Pontic.	Funzione
SW1-1: LED	Usato per abilitare o disabilitare il funzionamento del LED. ON (Default): I LED sono abilitati ed è possibile anche controllarli via comando remoto tramite l'ingresso LED. OFF: I LED sono disabilitati. Non è possibile alcun controllo remoto.
SW1-2: ACT	Usato per abilitare o disabilitare la funzione ACT ON: Il sistema è abilitato. Non è possibile alcuna attivazione. Importante! Non usare la funzione ACT™ se nel luogo di installazione del rivelatore si prevede movimento di oggetti al di fuori dell'area protetta come, ad esempio, il movimento di persone in un corridoio attiguo.
ON	ACT disabilitato.
OFF (Default)	ACT disabilitato.
SW1-3: Green Line	La funzione Green Line è abilitata. Per disabilitare la sezione microonda (MW) è necessario disinnescare il rivelatore applicando un comando di attivazione al morsetto LED (0V o 12V in funzione della polarità configurata tramite il ponticello LED/SET INPUT). Anche i LED verranno disabilitati in questo modo solo se al morsetto SET non viene applicata alcuna tensione. Note! Quando la funzione Green Line è attiva (Microonda spenta), il rivelatore si attiva usando la sola sezione ad infrarossi (PIR).
OFF (Default)	Quando la Green Line è disabilitata. La sezione a microonda (MW) è sempre accesa.

Predisposizione microinteruttori e ponticelli

Microint.Pontic.	Funzione
SW1-4: Self Test	Usato per testare le tecnologie di rilevazione. (Auto-test locale): Se non viene rilevata alcuna attivazione del canale PIR per 1 ora, il rivelatore eseguirà un auto-test. Se il test fallisce, l'uscita a relè FAULT/AM verrà attivata. (Auto-test remoto): L'Auto-test remoto si attiva quando il morsetto SET viene portato dalla condizione di Impatto INSERITO (Comando di attivazione applicato) alla condizione di Impatto DISINERITO (nessuna tensione applicata). A conferma che l'auto-test remoto è stato superato l'uscita a relè di allarme si attiverà per 5 secondi. Nel caso in cui l'auto-test sia fallito si attiverà l'uscita a relè FAULT/AM.
ON	
OFF (Default)	
J1 - Alarm EOL	I ponticelli J1 e J2 permettono la selezione dei valori resistivi da assegnare ai circuiti di Tamper e di Allarme (1K, 2.2K, 4.7K, 5.6K, 6.8K) in funzione della centrale d'allarme utilizzata (vedere la Figura 4 in basso). Il ponticello J3 inoltre, permette la selezione di una resistenza di 12K per supervisionare il circuito Anomalia/Anti-Mask.
J2 - Tamper EOL	
J3 - FAULT/AM EOL	
Ponticelli Per resistenza EOL	Segue lo schema di collegamento dei morsetti illustrato in Figura 4 quando si vuole collegare il sensore ad una centrale d'allarme usando il doppio o il triplo bilanciamento resistivo (EO/L).
J4- LED/SET INPUT	Usato per impostare la polarità dei comandi di attivazione per gli ingressi LED e SET. 

Prova di movimento (Walk Test)
Importante! Dopo aver alimentato il rivelatore, chiudere il coperchio entro 30 secondi per poter effettuare correttamente la fase di calibrazione del circuito di antimascheramento (AM).

1. Due o tre minuti dopo aver alimentato il rivelatore (inizializzazione) effettuare la prova di copertura dell'area da proteggere verificando la risposta del rivelatore subito dopo l'accensione del LED (Figura 7).
2. La portata della microonda va regolata tramite l'apposito potenziometro situato sulla scheda elettronica. Regolare il potenziometro della microonda al minimo possibile riferito all'area da proteggere (vedere Figura 5).

LED Stato Descrizione

LED	Stato	Descrizione
Giulio	Illuminato	Rilevazione del canale PIR
	Lampeggiante	Anomalia del canale PIR
Verde	Illuminato	Rilevazione del canale MW
	Lampeggiante	Anomalia del canale MW
Blu	Illuminato	ALARM
	Lampeggiante	Rilevazione circuito Anti-Mask Note! La rilevazione del canale Anti-Mask può essere attiva solo ad impianto "Disinserito" (Consultare la sezione del Cablaggio Morsetteria, morsetto SET).
Tutti i LED	Lampeggianti consecutivamente	All'alimentazione tutti i LED lampeggiano in sequenza fino alla fine del periodo di inizializzazione (2-3 minuti). Alta fine del periodo di inizializzazione il LED BLU continua a lampeggiare fino alla fine della fase di inizializzazione del canale Anti-Mask.

Note! L'indicazione di Mascheramento e/o Anomalia persiste fino a quando la causa non viene rimossa.

Specifiche Tecniche

Elettriche	
Assorbimento di corrente	16mA a 12V - (Nominale) 41mA a 12V - (Massimo)
Alimentazione richiesta	da 9V - a 16V.
Contatti di allarme	24V- 0.1A
Contatti Tamper	24V- 0.1A
Contatti FAULT/AM	24V- 0.1A
Ambientali	
Immunità RF	Conforme alle norme EN50130-4
Temp. funzionamento	da -10°C a 55°C
Temp. stoccaggio	da -20°C a 60°C
Fisiche	
Filtro	Protezione contro le luci bianche
Dimensioni	127.6 mm x 64.2 mm x 46.6 mm
Peso	120 gr.

FRANÇAIS

Le détecteur BvWare DT AM est le dernier détecteur de mouvements pour les installations professionnelles, et intègre les technologies Anti-Masque et Anti-Cloak™ (ACT™), ainsi que des résistances de fin de ligne (EOL) pour simplifier l'installation.
Le détecteur utilise un module Hyper Fréquence en bande K, qui permet une réduction de la pénétration à travers les murs.

Installation
Montage - BvWare DT AM peut être installé soit sur une surface plane soit en coin (gauche ou droit).
1. Retirer le couvercle du détecteur en utilisant un outil adéquat (décrit sous la Figure 1).
2. A l'aide d'un outil adéquat, ouvrez les pastilles pré-percées correspondantes sur la base du détecteur (cf. Figure 2).

Remarque! Si une utilisation d'une auto-protection aérienne. Il est impératif de fermer le couvercle de cette dernière à la vissant au mur (ou à l'angle du mur).
3. Pour définir le bon réglage vertical, positionnez l'appareil en LENTILLE GRAND ANGLE. Servez-vous de l'échelle figurant sur le côté inférieur droit de la carte PCB de couverture (cf. Figure 5) comme suit.
Hauteur de montage et position selon la taille de la pièce:

Hauteur de montage	L - LONG	C - COURT (SHORT)
2.1m-2.7m (6'11"-8'10")	15m (50')	6m (20')

4. Réglez les cavaliers (cf. § Commutateur DIP et cavaliers Réglages).
Important! Après la mise sous tension du détecteur, fermer le couvercle dans les 2 minutes pour que la période d'initialisation AM (Anti-Masque) démarre.

1. Deux minutes après avoir vérifié la mise sous tension (vérifier l'efficacité du détecteur sur la totalité de la zone à protéger).
2. Assurez-vous d'avoir bien réinstallé le couvercle frontal avant de mettre le détecteur sous tension (cf. Figure 7).
3. Le potentiomètre situé sur la carte PCB permet de régler la portée de détection hyperfréquence. Il est important de régler le potentiomètre sur le niveau le plus bas possible qui fournira cependant une couverture suffisante sur la totalité de la zone à protéger (cf. Figure 5).

Affichage LED

LED	Position	Signification
Jaune	Allumée (ON)	Détection IPR
	Cilignotante	Panne de canal IPR
Verte	Allumée (ON)	Détection HF (hyperfréquence)
	Cilignotante	Panne de canal HF
Bleu	Allumée (ON)	Indique une ALARME
	Cilignotante	Anti-masque Remarque! La détection Anti-masque est opérationnelle en mode ACT (Inactivé du système) seulement (cf. § Cablage des Termiaux, terminal de mise en service (SET)).
Toutes diodes LED	Cilignotante l'une après l'autre	Lors de la mise sous tension, les diodes LED cilignent de l'une après l'autre. Une fois toutes les diodes allumées, la séquence de chauffage démarre (2 à 3 minutes). A la fin de ce processus, l'efficacité du test de passage du LED BLEU continue à cilignoter jusqu'à la fin du lancement de l'AM (pour mettre un terme au cilignotement, fermez le couvercle).

Remarque! Les indications AM et Panne persistent jusqu'à élimination de la cause du masquage ou réparation de la panne.

Cablage des Termiaux (cf. Figure 5)

Terminal	Description
FAULT / AM	Sortie normalement fermée : La sortie FAULT/AM s'ouvre dans les cas suivants: • Détection ou neutralisation d'un masquage, • Erreur du test automatique, • Tension d'entrée inférieure à BVCC.
LED	Contrôle à distance des indicateurs LED Lorsqu'un "Signal d'Activation"™ est appliqué à l'entrée LED du bloc des terminaux ou que le produit est en all cases provide adequate warning or protection. Seller, in no event shall be liable for any direct or indirect damages or any other losses occurred due to any type of tampering, whether intentional or unintentional such as masking, painting or spraying on the lenses, mirrors or any other part of the detector. Buyer understands that a properly installed and maintained alarm will only reduce the risk of burglary, robbery or fire without warning, but it is not insurance or a guaranty that such event will not occur or that there will be no personal injury or property loss as a result thereof. Consequently seller shall have no liability for any personal injury, property damage or loss based on a claim that the product fails to give warning. However, if seller is held liable, whether directly or indirectly, for any loss or damage arising under this limited warranty or otherwise, regardless of cause or origin, seller's maximum liability shall not exceed the purchase price of the product, which shall be complete and exclusive remedy against seller. No employee or representative of Seller is authorized to change this warranty in any way or grant any other warranty. WARNING: This product should be tested at least once a week. CAUTION: risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to local regulations.
SET	Contrôle à distance de la mise en Service (SET) / mise en inactivité du système (UNSET). Lorsqu'un "Signal d'Activation"™ est appliqué à l'entrée LED du bloc des terminaux ou que le produit est en all cases provide adequate warning or protection. Seller, in no event shall be liable for any direct or indirect damages or any other losses occurred due to any type of tampering, whether intentional or unintentional such as masking, painting or spraying on the lenses, mirrors or any other part of the detector. Buyer understands that a properly installed and maintained alarm will only reduce the risk of burglary, robbery or fire without warning, but it is not insurance or a guaranty that such event will not occur or that there will be no personal injury or property loss as a result thereof. Consequently seller shall have no liability for any personal injury, property damage or loss based on a claim that the product fails to give warning. However, if seller is held liable, whether directly or indirectly, for any loss or damage arising under this limited warranty or otherwise, regardless of cause or origin, seller's maximum liability shall not exceed the purchase price of the product, which shall be complete and exclusive remedy against seller. No employee or representative of Seller is authorized to change this warranty in any way or grant any other warranty. WARNING: This product should be tested at least once a week. CAUTION: risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to local regulations.
SET	Contrôle à distance de la mise en Service (SET) / mise en inactivité du système (UNSET). Lorsqu'un "Signal d'Activation"™ est appliqué à l'entrée LED du bloc des terminaux ou que le produit est en all cases provide adequate warning or protection. Seller, in no event shall be liable for any direct or indirect damages or any other losses occurred due to any type of tampering, whether intentional or unintentional such as masking, painting or spraying on the lenses, mirrors or any other part of the detector. Buyer understands that a properly installed and maintained alarm will only reduce the risk of burglary, robbery or fire without warning, but it is not insurance or a guaranty that such event will not occur or that there will be no personal injury or property loss as a result thereof. Consequently seller shall have no liability for any personal injury, property damage or loss based on a claim that the product fails to give warning. However, if seller is held liable, whether directly or indirectly, for any loss or damage arising under this limited warranty or otherwise, regardless of cause or origin, seller's maximum liability shall not exceed the purchase price of the product, which shall be complete and exclusive remedy against seller. No employee or representative of Seller is authorized to change this warranty in any way or grant any other warranty. WARNING: This product should be tested at least once a week. CAUTION: risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to local regulations.

**Signal d'Activation- Si une tension de 12VDC est appliquée et que le Cavalier d'entrée LED/SET est en position 12V (Défaut de position) - Ou -
Si la Terre (GND) est reliée, le Cavalier d'entrée LED/SET est en position 0V.

Commutateur DIP et cavaliers Réglages

DIP/Cavalier	Fonction
SW1-1: LED	Définit le fonctionnement des indicateurs LED du détecteur. L'activation des indicateurs LED dépend du paramétrage du contrôle à distance de leur fonctionnement (cf. § Cablage des Termiaux, borne de commande).
Arrêt (OFF)	Les indicateurs LED sont désactivés.
SW1-2: ACT	Définit si le mode ACT est activé ou non ACT activé. Important! N'utilisez pas le mode ACT™ dans une zone en dehors de laquelle le passage d'objets en mouvement vous paraît logique et attendu, un coulo

NEDERLANDS

De Bware DT AM detector is de ultieme bewegingsmelder voor professionele installaties, met integratie van beide technologie n Anti-Masking en Anti-Cloak™ (ACT™) met ingebouwd end-of-line (EOL) weerstand voor een eenvoudige installatie.

Montage: De Bware DT AM kan op een vlakke oppervlakte worden gemonteerd, of op een muurhoek (noekmontage).
 1. Verwijder het voorste lid met het juiste gereedschap (zoals beschreven in Afdeling 1).
 2. Met een passend gereedschap open u de volgende uitwerpers op de basis van de detectoren (zie Afdeling 2).

Opmerking: Als een achterslamper wordt gebruikt, is het verplicht om de achterplaat van de stamper op de muur (of muurhoek) te verschoven.
 3. Om voor de brede hoeken de juiste verticale afstelling te selecteren, gebruikt u de schaal op de rechts onderkant van de PCB lid. U doet dit als volgt:

Montagehoogte	L - LANG	C - CURTA
2.1m-2.7m	15m	6m

Opmerking: Voor installaties in een hal selecteert u de positie naar "LANG" en monteert u de detector op een hoogte van 2,5 m/8'2".
 4. Jumpers instellen (zie sectie DIP-schakelaar en Jumperinstellingen).

Opmerking: Stel na elke wijziging aan de instellingen, de detector opnieuw in.
 5. Installeer het voorste lid terug op zijn plaats (in omkeerde volgorde van de verwijdering).
 6. Voer een looppoets uit (zie sectie Looppoets hieronder).

Bredering terminal (zie Afdeling 6)

Terminal	Beschrijving
-12 +	12VDC-voeding
ALARME	N.C.-relais
TAMPER	N.C. Sabotageschakelaar
FALUTAM	Normaal gesloten relais. De relais STORING/AM wordt bij de volgende gebeurtenissen geopend: * Detectorbewaking wordt ingeschakeld (Relais alarm wordt ook geopend) * Zelf-test is mislukt * Ingangsspanning is lager dan 8VDC

LED-werkingsafstandsbediening
 Als op de LED van de ingangsterminal een "Activeringssignaal" wordt toegepast, worden alle LED's uitgeschakeld. LED's worden ingeschakeld als niks is aangesloten (tenzij LED-jumper op UIT is ingesteld) of 0V/12V wordt toegepast (volgens de LED/INSTELLING positie van de ingangsterminal, 12 V of 0 V).

SET
 Externe besturing INSTELLEN/NIET INSTELLEN
 INSTELLEN: Als een "activeringssignaal" wordt toegepast, wordt de anti-maskingsdetectie uitgeschakeld (voor configuratie Klasse 2).
 NIET INSTELLEN: Als niks is aangesloten of als 0V/12V wordt toegepast (volgens de LED/INSTELLING).

****Activeringssignaal-**
 Als 12VDC wordt toegepast en de ingangsterminal LED/INSTELLEN is op de positie 12V (standaardpositie) -Of-
 0V wordt toegepast en ingangsterminal LED/INSTELLEN is op positie 0V
 DIP-schakelaar en Jumperinstellingen

DIP/Jumper	Functie
SW1-1: LED	Gebruikt om de werking van de LED's van de detector vast te stellen.
AAN (Standaard)	LED's worden ingeschakeld zodat via de ingangsterminal van de LED, LED-werkingsafstand mogelijk is.
UIT	LED's worden vast uitgeschakeld

SW1-2: ACT	Gebruikt om vast te stellen of de ACT-modus is in- of uitgeschakeld.
AAN	ACT ingeschakeld

UIT (Standaard)	ACT uitgeschakeld.
-----------------	--------------------

SW1-3: Groene lijn
 De Bware DT AM bevat de Groene lijn functie die misleuhtingen volgt door een overschot uitsluiting te vermijden. Deze functie schakelt het MW-kanal uit als het alarmsysteem "uitgeschakeld" is en dus de overmatige MW-uitstraling vermijdt wanneer het gebied bezet is.

AAN	Groene lijn functie is ingeschakeld; om de MW-modus in de periode "uitgeschakeld" te deactiveren, moeten ook de LED's van de afstands door de LED-terminal worden uitgeschakeld.
-----	--

UIT (Standaard)	Functie Groene lijn is uitgeschakeld; MW is constant in gebruik
-----------------	---

SW1-4: Zelf Test	Gebruikt om detectiehoofdelement te testen.
------------------	---

AAN	(lokale zelftest): als in het PIR-kanal gedurende 1 uur geen alarmdetectie plaatsvindt, voert de detector een zelftest uit. Als de lokale zelftest mislukt, wordt de STORING/AM-relais actief.
-----	--

UIT (Standaard)
 (Externe zelftest): de externe zelftest wordt geactiveerd als de terminal INSTELLEN van de modus INSTELLEN naar NIET INSTELLEN schakelt. Opdat de externe zelftest slaagt, zal de alarm-relais gedurende 5 seconden actief zijn.

J1 - Alarm EOL
 Jumpers J1 en J2 maken de selectie mogelijk voor sabotage- en alarmweerstand (1K, 2.2K, 4.7K, 5.6K, 6.8K) volgens het bedieningspaneel (zie Afdeling 4). Met jumper J3 is de selectie mogelijk van 12K voor Storing/Anti-maskering.

J3 - STORING/AM EOL
 Via het aansluitingschema van het aansluitkabel in Afdeling 4 is u de detector op een twee-drievoudige zone aan het einde van de lijn (DEOL/TEOL) aansluit.

Jumperinstellingen

Jumper	Functie
J4 - LED/INSTELLEN/INGANG	Gebruikt om de polariteit van de externe ingang vast te stellen.

Zie sectie Bedrading terminal, terminals LED en INSTELLEN

Zie sectie Bedrading terminal, terminals LED en INSTELLEN

Looppoets
Belangrijk: De detector behuizing moet gesloten worden binnen de 30 seconden na het openen van de stroom, zo niet zal de AM-kalibratie mislukken.

- Twee minuten na het toepassen van voeding (opwarmingsperiode), voert u over het hele beschermde gebied van de detector de looppoets uit om goede werking van de eenheid te verifi ren (zie Afdeling 7).
- Het MW-bereik kan worden afgesteld door de potentiometer op de PCB te gebruiken. Het is belangrijk dat de potentiometer op de laagst mogelijke instelling wordt ingesteld om het binnenste beschermde grensgebied voldoende dekking te bieden (zie Afdeling 5).

LED	Status	Beschrijving
Geel	Aan	PIR-detectie
	Knippen	Storing in PIR-kanal
Groen	Aan	MW-detectie
	Knippen	Storing in MW-kanal
Blauw	Aan	ALARME
	Knippen	Anti-maskingsdetectie

Alle LED's
 Knippen achterenvolgende
 Bij het opstarten, zullen de LED's achterenvolgens knippen tot het einde van de opwarmperiode (2-3 minuten). Op het einde van de opwarmingsperiode zal de BLAUW LED blijven knippen tot het einde van de AM kalibratie.

Opmerking: AM- en Storingindicaties gaan door tot einde van maskering wordt verwijderd of de storing wordt gecorrigeerd.

Technische specificaties

Elektrisch	
Stroomverbruik	16mA bij 12VDC (typisch) 41mA bij 12VDC (max.)
Spanningsverestien	9 - 16VDC
Alarmcontacten	24VDC, 0.1A
Sabotagecontactencontacten	24VDC, 0.1A
STORING/AM-contacten	24VDC, 0.1A
Omgeving	
RF-immuniteit	Volgens EN50130-4
Bedrijfstemperatuur	-10C tot 55C
Opslagtemperatuur	-20C tot 60C
Optisch	
Filtrering	Wit licht-bescherming
Fysiek	
Grootte	127,6 x 64,2 x 46,6 mm
Gewicht	120 gr.

ESPA OL

El detector BWare DT AM es el  ltimo en detectores de movimiento para instalaciones profesionales, incorporando las tecnolog as de Anti-Enmascaramiento y Anti-Cloak™ (Anti-Camuflaje), e incorporando resistencias de final de l nea para facilitar la instalaci n.

El detector emplea la Banda K de microondas, que proporciona una menor penetraci n a trav s de las paredes.
Instalaci n / Mantenimiento
 Montaje - El BWare DT AM puede montarse en una superficie plana o en un r n de pared (montaje en r n).
 1. Quitar la tapa del detector utilizando una herramienta adecuada (como se muestra en la Figura 1)

2. Usando una herramienta apropiada, abra los siguientes agujeros pre-marcados en la base del detector (ver Figura 2).
Nota: Si se va a usar un tamper posterior, es obligatorio atornillar la placa posterior del tamper a la pared (o al r n de la pared).

3. Para seleccionar la posici n de ajuste vertical correcta para la lente de gran  ngulo, usar la escala que hay en la parte inferior derecha de la PCB, seg n se indica a continuaci n:
Altura de montaje y escala seg n el tama o de la habitaci n:

Altura de Montaje	L - LONG	S - SHORT
2.1m-2.7m (6'11"-8'10")	15m (50')	6m (20')

4. Configure los puentes (ver la secci n Configuraci n de Puentes).
Nota: Reince el detector despu s de que se haga un cambio en las configuraciones.
 5. Coloque de nuevo la tapa delerantera en su lugar (de modo inverso al de extracci n).
 6. Realice una prueba de Movimiento (ver la secci n Prueba de Movimiento).

Cableado del Terminal (ver Figura 6)

Terminal	Descripci�n
-12	Entrada de 12VDC
ALARME	Rel� N.C.
TAMPER	Interruptor del Tamper N.C.
FALUTAM	Rel� Normalmente Cerrado: El rel� FALLO/AM se abre en los siguientes casos: * El detector est� enmascarado (el rel� de Alarma tambi�n se abre) * Fallo en el auto test * El voltaje de entrada es inferior a 8VDC

LED
Control remoto del funcionamiento del LED
 Cuando se aplica una "Se al de Activaci n" al terminal de entrada del LED, se desactivan todos los LEDs del detector.
 Los LEDs se activan si no hay nada conectado (a menos que el puente del LED est  en OFF) o se aplican 0V/12V (seg n la posici n del Puente LED/SET input, 12V o 0V)

SET
Control remoto del Armado/Desarmado (SET/UNSET)
Armado (SET): Si se aplica una "Se al de Activaci n", la detecci n de anti-enmascaramiento se desactiva (para configuraciones de Grado 2).
Desarmado (UNSET): Si no hay nada conectado o se aplican 0V/12V (seg n la posici n del Puente LED/SET input, 12V o 0V) se habilita el anti-enmascaramiento (ver tambi n el apartado "Green Line" y el "Auto Test Remoto" en la tabla Configuraci n de los Puentes).

****Se al de Activaci n-**
 Si se aplica 12VDC, y el puente (jumper) LED/SET INPUT est  en la posici n 12V (posici n por defecto) - O -
 Se aplican 0V y el puente (jumper) LED/SET INPUT est  en la posici n 0V.

Configuraci n de los Puentes

Puente	Funci�n
SW1-1: LED	Se utiliza para definir el funcionamiento de los LEDs del detector.
ON (Predefinito)	Los LEDs est�n habilitados, permitiendo el control del LED a trav�s del terminal de entrada del LED
OFF	Los LEDs est�n deshabilitados.
SW1-2: ACT	Usado para determinar si el modo ACT est� habilitado o deshabilitado
ON	ACT Habilitado Importante: No use el modo ACT™ si usted espera que haya objetos en movimiento fuera del �rea protegida requerida, p.ej. un pasillo.
OFF (Predefinito)	ACT Deshabilitado.

SW1-3: Green Line
 El BWare DT AM incluye la caracter stica Green Line que sigue las directivas medioambientales de emisi n. Esta caracter stica deshabilita el canal MW cuando el sistema de alarma est  "DESARMADO", eliminando as  la emisi n excedente de MW mientras las instalaciones est n ocupadas.
 La caracter stica Green Line est  habilitada. Para desactivar el m dulo de MW en el periodo de "Desarmado", los LEDs tambi n deben deshabilitarse remotamente mediante el terminal LED.

ON
Nota: Cuando el "Green Line" est  activado (MW desactivado), el detector seguir  activo (s lo con el PIR).

OFF (Predefinito)
 La caracter stica Green Line est  deshabilitada: el MW est  constantemente en uso.

SW1-4: SELF TEST (Auto Test)
 Usado para probar/parar las tecnolog as de detecci n.

ON
 (Auto Test Local): Si no hay detecci n de alarma en el canal PIR durante una hora el detector har  un auto-test. Si el auto test local falla, se activar  el Rel  FALUTAM (FALLO/AM).
 (Auto Test Remoto): El Auto Test Remoto se activa cuando el terminal SET se cambia del modo SET (Armado) a UNSET (Desarmado). Si el auto test remoto se realiza correctamente, se activar  el Rel  ALARME (Alarma) durante 5 segundos.
 En caso de fallo del auto test remoto, se activar  el Rel  FALUTAM (FALLO/AM).

J1 - Alarm EOL
 Los puentes J1 y J2 permiten la selecci n de la resistencia del Tamper y de la Alarma (1K, 2.2K, 4.7K, 5.6K, 6.8K) en funci n de  n de control (ver Figura 4). El puente J3 permite la selecci n de 12K para el Fallo/Anti-Enmascaramiento.

J3 - STORING/AM EOL
Puentes TRIPLE RFL (Fin de L nea)
 Signa el diagrama de conexi n del bloque de terminales de la Figura 4 cuando conecta el detector a una Zona de Doble/Triplo Fin-de-L nea (DEOL/TEOL)

J4 - LED/SET INPUT (ENTRADA LED/SET)
 Usado para determinar la polaridad de la entrada externa.

Prueba de Movimiento
Importante: La tapa del detector debe estar cerrada cuando se le da alimentaci n, o c rrase antes de que pasen 30 segundos tras dar alimentaci n. Si no, se producir  un error en la calibraci n del AM.
 1. Dos minutos despu s de la puesta en marcha (perodo de calentamiento), haga la prueba de movimiento al detector en toda el  rea protegida para verificar el correcto funcionamiento de la unidad (ver Figura 7).
 2. El rango de la Banda K del MW puede ajustarse mediante el potencio metro situado en el PCB (placa de circuito impreso). Es importante ajustar el potencio metro a la configuraci n m s baja posible que aun pueda proporcionar suficiente cobertura al l mite interno del  rea protegida (ver Figura 5).

Nota: Las indicaciones de AM y Problema contin an hasta que se elimina el enmascaramiento o se soluciona el problema.

Visualizaci n de los LEDs

LED	Estado	Descripci�n
Amarillo	Encendido	Detecci�n PIR
	Parpadeando	Problema en el canal PIR
Verde	Encendido	Detecci�n MW
	Parpadeando	Problema en el canal MW
Azul	Encendido	ALARMA
	Parpadeando	Detecci�n Anti-Enmascaramiento

Todos los LEDs
 Parpadeando sucesivamente
 Al dar alimentaci n, los LEDs parpadear n consecutivamente hasta que finaliza el ciclo de calentamiento (2-3 minutos). Al final del periodo de calentamiento, el LED AZUL continuar  parpadearando hasta que termine la calibraci n del AM. (V ase la secci n Cableado del Terminal).

Nota: Alimentado desde una fuente de alimentaci n de m ximo 5A.

Especificaciones T cnicas

El�ctricas	
Consumo de corriente	16mA a 12VDC (t�pico) 41mA a 12VDC (M�x.)
Requisitos de voltaje	9-16VDC**
Contactos de Alarma	24VDC, 0.1A
Contactos de Tamper	24VDC, 0.1A
Contactos FALLO/AM	24VDC, 0.1A
Ambientales	
Immunitad a RF	Seg�n EN50130-4
Temperatura de funcionamiento	-10�C a 55�C (-14�F a 131�F)
Temperatura de almacenamiento	-20�C a 60�C (-4�F a 140�F)
Optica	
Filtrado	Protecci�n contra luz blanca
Fisicas	
Tama�o	127,6 x 64,2 x 46,6 mm (5 x 2,5 x 1,84 pul)
Peso	120 gr. (4.2 oz.)

PORTUGU S

O detector BWare DT AM   a  ltima palavra em detector de movimento para instala es profissionais, incorporando a tecnologia Anti-m scara e Anti-Cloak™ (ACT™). Tecnologia Anti-camuflagem, aderindo  s novas diretrizes amistosas do meio ambiente.
 O detector BWare DT AM   dispon vel em 15m, e incluem resist ncias embutidas de fim-de-linha (EOL) para simplificar a instala o.

Nota: Todos os detectores da RISCO Group que possuem o sistema de anti-m scara atrav s de Infravermelho Ativo, possuem uma prote o contra luz branca diretamente em cima do sensor projet tico. Isso n o   uma prote o para transporte. N o retire a prote o contra luz branca, pois isso al m de n o melhorar o desempenho, torna o detector passivo de disparos falsos gerados por rajadas de luz.

Instala o / Manuten o
 Montagem - O BWare DT AM pode ser montado numa superf cie plana ou num canto da parede (montagem de canto).
 1. Retire a tampa da frente do detector usando a ferramenta adequada (conforme descrito na Figura 1).
 2. Usando uma ferramenta apropriada, abra os seguintes furos pr -marcados na base do detector (ver Figura 2).

Nota: Se um tamper de parede precisa ser usado,   obrigat rio parafusar a parte pl stica tr s para a parede (ou ao canto da parede).

3. Para usar a posi o correta de ajuste vertical para lentes de  ngulo aberto, use a escala localizada no lado direito inferior a tampa do PCB, como segue:
Altura de montagem e posi o da escala baseada no tamanho do local:

Altura de Montagem	L - LONGA	C - CURTA
2.1m-2.7m (6'11"-8'10")	15m (50')	6m (20')

4. Configure os jumpers (ver a se o Configuraci n de Jumpers).
Nota: Reajuste o detector depois de cada modifica o feita nas configura es.
 5. Recoloco a tampa dianteira em seu lugar (na seq ncia contr ria   da remo o)
 6. Realize uma prova de Caminhada (ver abaixo a se o Prova de Caminhada).

Terminais de Fia o (ver Figura 6)

Terminal	Descri�o
-12 +	Entrada de 12VDC
ALARME	Rel� N� F.
TAMPER	Chave do tamper N.F.
FALHA/AM	Rel� Normalmente Fechado: O rel� FALHA/AM se abre nos seguintes eventos: * O detector � mascarado (O rel� do Alarme tamb�m se abre) * Falha no auto test * A voltagem de entrada � inferior a 8VDC

LED
Control remoto da opera o do LED
 Quando um "Sinal de Acionamento"   aplicado ao terminal de entrada do LED, todos os LEDs s o desativados.
 Os LEDs s o ativados se nada estiver conectado (a menos que o jumper do LED esteja em OFF) ou 0V/12V for aplicado (segundo a posi o do Jumper de Entrada do LED, 12V ou 0V).

SET
Control remoto do SET/UNSET
SET: Se um "Sinal de Acionamento"   aplicado, a detecci o anti-m scara ser  desativada (para a configura o de Classe 2).
UNSET: Se nada   conectado ou 0V/12V   aplicado (segundo a posi o do Jumper de Entrada do LED/SET, 12V ou 0V) a detecci o anti-m scara   habilitada (ver tamb m "Green Line" e "Auto Test Remoto" na tabela Configura es de Jumper).

****Sinal de Acionamento-**
 Se 12VDC   aplicado, e o Jumper de Entrada do LED/SET est  na posi o 12V (Predefinito) - O U -
 0V   aplicado e o Jumper de Entrada do LED/SET est  na posi o 12V

Interruptores DIP y puentes de configuraci n

DIP/Jumper	Funci�n
SW1-1: LED	Usado para determinar a opera�o dos LEDs do detector.
ON (Predefinito)	LEDs est�o habilitados, permitindo o controle do LED atrav�s do Terminal de Entrada do LED
OFF	LEDs est�o desativados.
SW1-2: ACT	Usado para determinar se o modo ACT est� habilitado ou desativado.
ON	ACT Habilitado Importante: N�o use o modo ACT™ se pensa que possam existir objetos que se movam fora da �rea protegida requerida, um corredor por exemplo.
OFF (Predefinito)	ACT Desativado.

SW1-3: Green Line
 O BWare 5150T3G inclui uma caracter stica Green Line que segue as diretrizes de prote o ao meio ambiente, evitando a emiss o de energia em excesso. Esta caracter stica desativa o canal de Microondas quando o sistema de alarme est  "Desarmado", eliminando assim a emiss o de excedentes de Microondas enquanto o local estiver ocupado.

ON
Nota: Quando "Green Line"   ativado (Microondas Desligado), o detector ainda estar  funcionando (apenas Infravermelho Passivo).

OFF (Predefinito)
 A caracter stica Green Line est  desativada: o Microondas est  constantemente em uso.

SW1-4: Auto Teste
 Usado para testar as tecnolog as de detecci o.

ON
 LO (Auto Teste Local): Se n o h  detecci o de alarme no canal Infravermelho Passivo durante o perodo de 1 (uma) hora, o detector far  um auto teste. Se o auto teste local falhar, o Rel  FALHA/AM ser  ativado.
 (Auto Teste Remoto): O Auto Teste Remoto   ativado quando o terminal SET   mudado do modo SET a UNSET. No caso de o auto teste ter sido bem sucedido, o Rel  Alarma ser  ativado por 5 segundos. Em caso de falha do auto teste remoto, o Rel  FALHA/AM ser  ativado.

OFF (Predefinito)
 RE (Auto Teste Remoto): O Auto Teste Remoto   ativado quando o terminal SET   mudado do modo SET a UNSET. No caso de o auto teste ter sido bem sucedido, o Rel  Alarma ser  ativado por 5 segundos. Em caso de falha do auto teste remoto, o Rel  FALHA/AM ser  ativado.

J1 - Alarm EOL
 Os jumpers J1 e J2 permitem a sele o da resist ncia do Tamper e da Alarma (1K, 2.2K, 4.7K, 5.6K, 6.8K) de acordo com o painel de controle (ver Figura 4 abaixo). O jumper J3 permite a sele o de 12K para Falha/Anti-Enmascaramiento.

J3 - STORING/AM EOL
Jumpers TRIPLOS EOL
 Signa o diagrama de conex o do bloco de terminais na Figura 4, ao conectar o detector a uma Zona de Duplo/Triplo Fim-de-Linha (DEOL/TEOL).

J4 - ENTRADA DO LED/SET
 Usado para determinar a polaridade da entrada externa.

Prueba de Movimiento
Importante: Ap s a energiza o do detector, feche a tampa dentro de 2 minutos ap s
